SOUTHLAND OATS

775 Southland Oats (Certified), just recently developed by the North Florida Experiment Station, not only yields well but furnishes up to 20% more grazing than its closest competitor as it stools out heavily. It is resistant to Victoria blight and moderately resistant to crown rust. Although some yields have been as high as 70 bushels to the acre the average would be somewhat less. One of its assets is its ability to withstand lodging. Not prepaid: Bus. (32 lbs.) \$3.65; 4 bus. or more, \$3.40 per bus.; 48 bus. or more, \$3.35 per bus. Write for quantity prices when ready to buy.

America's Greatest Seed House Serving the South Exclusively!

SINGLETARY PEAS

The Wonder Crop

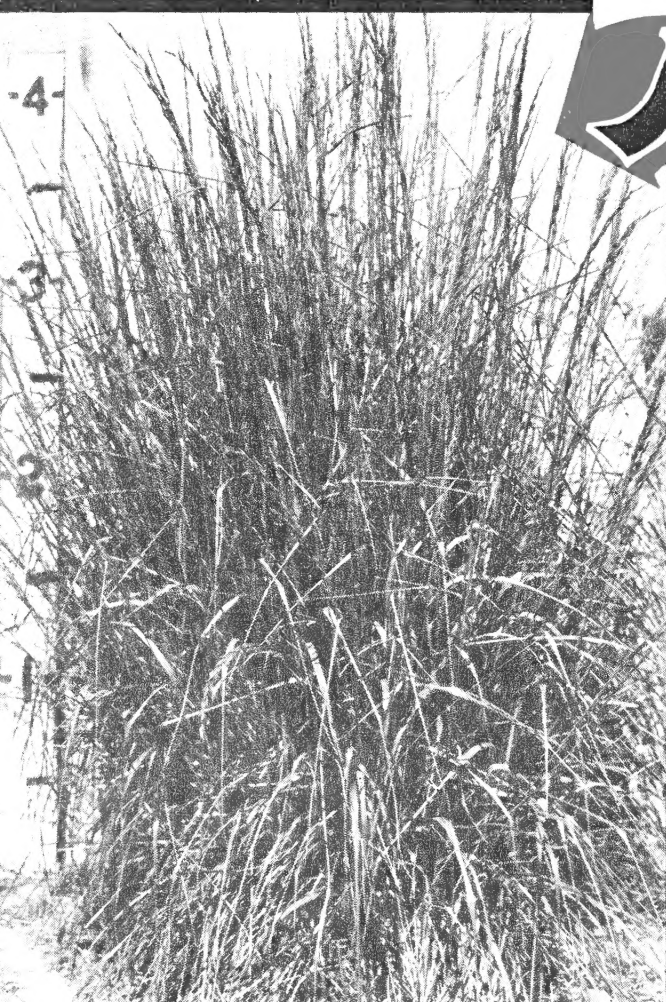

808 This Wild Winter Pea was discovered in Louisiana by Professor B. H. Singletary of the College of Agriculture, Louisiana State University. It is a valuable soil improving winter legume for Southern farmers and furnishes plenty of green matter for turning under. Singletary Peas save you money as they will reseed themselves, thereby eliminating the necessity of replanting every year. Will furnish excellent supplemental grazing when planted in combination with a small grain crop such as Oats. Grazing after seed pods mature will cause serious upset in digestion of cattle and horses. A seed crop of Singletary Peas is easily saved and will average 1,000 lbs. to the acre in good land under favorable weather conditions with enough seed scattered to insure a stand the following winter. If planted alone 40 lbs. of seed is needed per acre, in Oats 20 to 30 lbs. will be sufficient. Plant preferably in drills 1 to 2 inches deep depending on soil types. Soil should be well drained. Singletary Peas should be inoculated with Nitragin "C." Neglect to do so may cause crop failure.

Prices: Lb. 30c; 5 lbs. \$1.10. Not prepaid; 10 lbs. \$1.45; 100 lbs. \$11.25; 500 lbs. \$55.75; 1,000 lbs. \$111.00; 2,000 lbs. \$220.00.

Inoculate all
LEGUMES

All legumes should be inoculated for best results. Field tests have shown that better crops are harvested when the seeds are inoculated and often the lack of proper inoculation means a failure. This applies to all Clovers, Alfalfa, Winter Peas and Vetches. The cost is small. When ordering be sure to state name of seed for which inoculation is to be used. See 3rd yellow page in front of catalog for prices.

ALTA FESCUE

822 Alta Fescue has great promise of becoming one of the greatest all year round pasture, hay and silo grasses for the South. It is a semi-bunch long lived perennial grass attaining a height of from 2½ to 3 feet with numerous dark green, smooth, shiny leaves developing mostly from the crown of the plant rather than from the stem. It grows practically the year round in favorable seasons. The growth may be somewhat slow the first year while the extensive, deep penetrating root system is being developed, but will show a rapid and vigorous growth after that time.

Alta Fescue is adapted to nearly all soils in the South that will retain sufficient moisture and is very tolerant to wet and overflowing land. It is well adapted for planting with most clovers for mixed pastures and will greatly curtail clover bloat.

The seed may be sown from September to December and again in February and March on well prepared land. Fall planting, however, is recommended. Do not cover more than ½ inch. Sow at the rate of 10 to 15 lbs. per acre.

Lb. 95c; 5 lbs. \$4.35. Not prepaid; 10 lbs. \$7.00; 100 lbs. \$65.00.

Peas
Creole

Reuter's CREOLE English Peas

Creole Peas have the outstanding characteristics of being definitely resistant to various diseases that are a problem when growing other varieties of English Peas. They are also immune to root-rot, mildew and insect pests. Withstand our coldest winters when all other peas are killed. Thrive better during hot weather.

Pods are 3 to 3½ inches long and packed with 5 to 7 deliciously sweet smooth green peas of a distinctly superior flavor. Retains its tenderness and sweetness after it is fully matured. The vigorous vines average 6 to 7 feet in height and carry an enormous crop—bears an abundance of peas from bottom to the top of the vines. Plantings may be conducted from September, affording excellent food for the family during the cooler season of the year. Economical to sow—one or two pounds planted in good garden soil and properly staked will produce all the green peas an average family can consume and have a sufficient quantity in surplus to can.

A unique feature of Creole English Peas is that it is so hardy that many County Agents in Louisiana are emphasizing its value as a winter cover crop to be grown on cotton stalks. It is claimed that they can be produced as cheaply as soy beans and hence can be used to replace Austrian Winter Peas or Vetch to a much greater advantage as they can be turned under three months earlier and with a heavier yield of green matter per acre.

Dont fail to plant Reuter's Genuine Creole English Peas this fall! ¼ lb. **20c**; ½ lb. **30c**; 1 lb. **50c**; 2 lbs. **90c**; 5 lbs. **\$1.90**. Not prepaid: 15 lbs. (pk.) \$3.25; 60 lbs. (bus.) \$11.25; 120 lbs. (Bag) \$20.50.

This pea, like all legumes, should be inoculated to secure maximum growth and yield. *Nitragin* is the best and most reliable inoculating material on the market—it is inexpensive. Full simple directions on each package.

Prices: Garden Size (inoculates up to 6 lbs.) 15c; 100 lb. size 50c.

CLOVERS FOR WINTER PASTURES

IMPROVED LOUISIANA White Dutch Clover

722. This improved strain of Louisiana-grown White Dutch Clover grows much more vigorous and will last longer than the regular White Dutch during our hot Summer months. It starts out very early in the Fall and when properly fertilized makes an excellent Winter pasture. Two cuttings of hay may often be obtained. This clover came originally from New Zealand where it is also known as Mother Clover. Sow during the Fall at the rate of 10 lbs. per acre when planted alone, or 4 to 6 lbs. on established pastures. For maximum results inoculate seeds with Nitragin "B." $\frac{1}{4}$ lb. 55c; lb. \$1.85; 5 lbs. \$8.50. Not prepaid: 10 lbs. \$15.00; 100 lbs. \$140.00.

PERSIAN CLOVER

743. A valuable clover that should be planted on every pasture in the South. Furnishes splendid grazing from December until June. Will carry 4 to 6 head of cattle per acre throughout the entire growing season. Yields 2 to 3 tons of rich, palatable hay per acre. Reseeds itself even when closely grazed and spreads rapidly. Makes an upright growth, 2 to 3 feet high, bears small pink flowers, and seeds heavily. Will stand heavier, wetter lands than most clovers. As a soil builder, many of our customers report that they have doubled their yields of corn and cotton after two years of this clover.

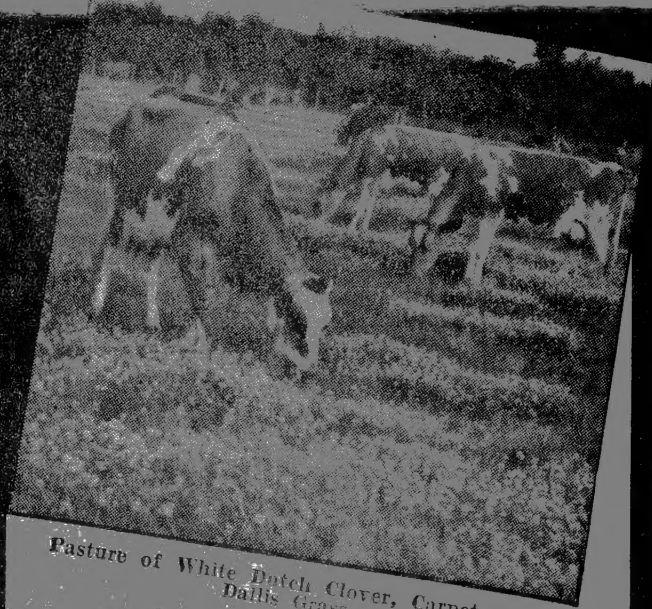

Persian Clover grows well in mixtures, and is an ideal crop to grow in connection with White Dutch, Bermuda, Dallis Grass, also Lespedeza for both hay and pasture. It has a deeper root system than White Dutch and requires less moisture for its success. Grows equally well on clay or loamy soils. The lime requirements are very low. Thrives on upland soils. Grows rapidly—fully two weeks ahead of White Dutch. Sow 6 to 8 pounds of seed per acre from September to November. Cover very lightly. Seed should be inoculated with NITRAGIN B. Lb. 90c; 5 lbs. \$4.00. Not prepaid: 10 lbs. \$6.50; 100 lbs. \$60.00.

HOP CLOVER

744. Grows well over the greater part of all the Southern States. It's very aggressive and hardy. Should be a part of all pasture Clover mixtures. It is one of the earliest to give grazing. Specially adapted to sandy soil and waste lands. When planted on rich soil, it will produce larger plants with more foliage. If used alone, sow 6 pounds per acre. Plant in early fall and spring. Makes slow growth through the winter, but comes on rapidly in the early spring. By the last of March, it will make excellent grazing. Seed should be inoculated with NITRAGIN B. Lb. 80c; 5 lbs. \$3.65. Not prepaid: 10 lbs. \$5.50; 100 lbs. \$50.00.

BLACK MEDIC

742. A wonderful Clover of the Alfalfa family, thriving on all soils except loose sands and water-logged types. It spreads faster than any other Clover. Reseeds itself with the closest possible grazing. Yields a very nutritious pasture. Sow from early September until March, the earlier the better. It can also be used to excellent advantage for cover crop purposes. Matures seed in May. It works well in mixtures with other clovers and grasses for grazing. Sow 10-15 pounds an acre. Inoculated seed. Lb. 50c; 5 lbs. \$2.15. Not prepaid: 10 lbs. \$2.60; 100 lbs. \$23.00.

Pasture of White Dutch Clover, Carpet and Dallis Grass

WHITE DUTCH CLOVER

731. Louisiana-grown White Dutch Clover furnishes abundant grazing throughout the year under severe Southern conditions. The hottest dry summers do not stop its steady and sure growth. It has no equal for winter and early spring grazing. Louisiana grown seed produces a crop that blooms fully a month earlier than imported seed, growing several inches taller with leaves and stems twice as large. It is relished by all livestock. It is adapted in the South to practically every region and type of soil. It is a perennial. White Dutch Clover does well with Bermuda and Dallis Grass, as well as with Kentucky Blue Grass and Red Top in the upper South.

Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone. On established pastures, from 4 to 6 lbs. of seed per acre will give a good stand. Seed should be inoculated with NITRAGIN B. $\frac{1}{4}$ lb. 45c; lb. \$1.25; 5 lbs. \$5.25. Not prepaid: 10 lbs. \$8.50; 100 lbs. \$80.00.

LADINO CLOVER

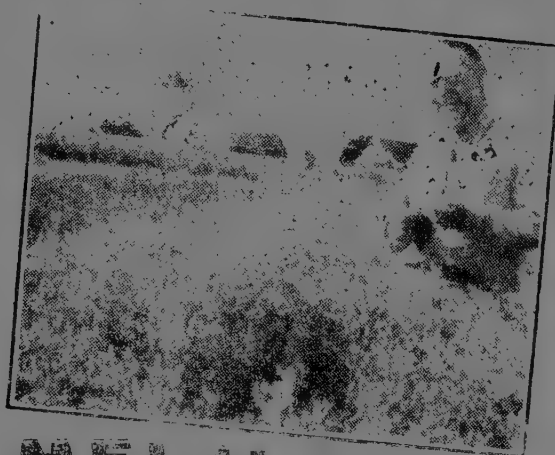

720. Certified. Similar in appearance and habit of growth to the common White Dutch Clover, but a much stronger and taller grower. It is excellent for hay, very rich in protein and is relished by all kinds of livestock. Also fine for pasture and if not grazed too closely will remain green until Fall. Sow 2 to 3 lbs. to the acre if planted with grasses, 5 to 6 lbs. if sown alone. Lb. \$2.35; 5 lbs. \$10.50. Not prepaid: 10 lbs. \$18.50; 100 lbs. \$175.00.

CRIMSON Clover

739. A great annual winter soilbuilder and a quick grazing crop. Yields 8 to 10 tons of green feed per acre: $1\frac{1}{2}$ to 2 tons of hay. Can be planted in corn and cotton fields from August to November, or combined with oats or other fall sown crops for spring pastures. Makes excellent quality hay if cut before maturity. Ready to graze by December. However, it is more often pastured in winter and plowed under as a green manure crop in the spring. Grows on poor soil if moisture is plentiful. Sow 15 to 20 lbs. per acre. Seed should be inoculated. Lb. 55c; 5 lbs. \$2.25. Not prepaid: 10 lbs. \$2.80; 100 lbs. \$25.00.

For reseeding Crimson Clover See Back Cover.

SOIL BUILDING CLOVERS AND GRAZING CLOVERS

MELILOTUS INDICA

738 Annual Yellow Blossom Sweet Clover. Also spoken of as "Sour Clover." One of our most valuable winter legumes for the lower South. Grows 2 to 3 feet tall and produces 5 to 10 tons of green matter by early May which may be easily plowed under. Stock seems to relish it when the taste is cultivated, but it is chiefly used for soil improvement. It thrives on all kinds of soil—does splendidly on acid soils if they are limed, which is inexpensive. It has proven a great winter cover crop for orchards and groves. Grows rapidly and abundantly. Increases cane yields on an average of 3 tons per acre, and corn planted after this remarkable crop gives 20 bushels more per acre. Tremendously reduces your fertilizer costs. Sow during the fall at the rate of 20 pounds to the acre if alone. Inoculate seed with Nitrugin A. Lb. 40c; 5 lbs. \$4.40. Not prepaid: 10 lbs. \$1.75; 100 lbs. \$14.50; 500 lbs. \$70.00; 1,000 lbs. \$142.50.

WHITE BLOSSOM SWEET CLOVER

735 (Melilotus alba). A biennial Sweet Clover. Grows two years from one seeding. Makes a large growth the first year, but a much heavier growth the second due to its extensive root system. It's a great soil builder. Relished by all kinds of livestock. No other pasture crop measures up to the summer and fall grazing furnished by this plant. Should be in all pasture mixtures. Here in the South two cuttings of hay are had the first year, and one cutting and a seed crop the second or grazing entirely, if preferable. Plant during September and October, at the rate of 15 to 20 pounds per acre, if sown alone. Our seed is carefully cleaned, scarified and scientifically graded and is a real value. Seed should be inoculated with Nitrugin A. Lb., 50c; 5 lbs., \$2.15. Not prepaid: 10 lbs. \$2.65; 100 lbs. \$24.50.

HUBAM CLOVER

721 An annual White Blossom Sweet Clover resembling the biennial white (Melilotus Alba) in appearance. From a slow start it will reach a growth of 7 to 8 feet in a few months. Excellent pasture and hay clover. Also fine for bee keepers. Will reseed itself. Seed should be inoculated with Nitrugin A and the soil well limed for best results. Sow 15 pounds to the acre. Lb. 50c; 5 lbs. \$2.15. Not prepaid: 10 lbs. \$2.55; 100 lbs. \$23.50.

MARVELOUS *Mixture*

714 A combination of three of our most famous pasture clovers for the South—Persian, White Dutch and yellow Hop. A seeding that will last for years. Produces fine quality and variety of most excellent feed and gives longer pasture season. It only requires 6 pounds of seed to the acre. Lb. 10c; 5 lbs. \$4.15. Not prepaid: 10 lbs. \$6.75; 100 lbs. \$67.50.

SOUTHERN GIANT BUR CLOVER

745 Provides excellent winter pasture for all farm animals and poultry. Makes good on land too wet for vetches and winter peas. A field once planted to it, with proper care, need never be planted again. Plant from July until November at the rate of 5 to 10 bushels per acre, preferably in cotton middles on reasonably well drained, sandy or loamy soils. Cultivate one time with a double shovel, trying to push the seed out of the middles to top and side of row. On established pastures plant 2 to 3 bushels per acre, drag and disc in, or let it alone; the tramping of stock will work the seed down into the sod. No inoculation is needed. Valuable planting leaflet free!

Reuter offers re-cleaned seed in the bur and with only enough dirt to insure proper inoculation.

Not prepaid: Bushel (10 lbs.) \$2.70; 100 lbs. \$24.00.

CALIFORNIA HULLED BUR CLOVER

740 (Medicago hispida). A builder of lands and animals. It adds nitrogen to the soil for the succeeding crops, adding vegetable matter, holding plant-food from washing away in winter rains and building up your livestock every day it is grazed. California Hulled Bur Clover is superior to the common spotted variety. It's easier to obtain a stand, grows faster, soon ready to graze by December 15, and withstands dry weather better. Stock relish it better and it re-seeds under the closest grazing. Simply broadcast the seed over the grazing area without further attention at the rate of 20 to 25 pounds to the acre. Do not confuse this type with Early Giant Bur Clover offered above. Seed should be inoculated with Nitrugin A. Lb. 85c; 5 lbs. \$3.85. Not prepaid: 10 lbs. \$6.00; 100 lbs. \$55.00.

RED CLOVER

737 Better known in the Northern part of the Cotton Belt, but thrives very well in the lower regions. Recommended chiefly as a winter and spring pasture Clover and soil improver on meadows. Some use it for hay, and yields 1 to 2 cuttings. In the states North of the Cotton Belt, Red Clover is sometimes a perennial, but as a rule it does not survive Southern summers. If fall sown it gets large enough to furnish fall grazing which is unusual for winter and spring clovers. Most soils suit this great soil-improving clover. Commence sowing during the early fall and spring at the rate of 12 to 15 lbs. per acre. When planted in pasture mixtures with other crops, 5 lbs. per acre is sufficient. Inoculate seed with NITRUGIN B. Lb. 80c; 5 lbs. \$3.65. Not prepaid: 10 lbs. \$5.35; 100 lbs. \$48.50.

ALSIKE CLOVER

736 This is the best-pasture Clover for low, wet, or poor lands. On the borders of marshes, swampy hillsides, and places too wet for other clovers this plant makes its best growth. It is of great value on dry soils. Sow with Rye or Top grass on the damp and low places in the pasture. Commence sowing during September, at the rate of 6 to 8 pounds per acre. Seed should be inoculated with NITRUGIN B to insure success. Lb. 90c; 5 lbs. \$3.95. Not prepaid: 10 lbs. \$6.35; 100 lbs. \$58.50.

FERTILIZER CROPS FOR THE SOUTH

HAIRY VETCH

\$20⁷⁵

per
100 lbs.

771. Ralaks at the top as a winter legume—the champion soil-improving crop. Turned under at the proper time it will double and triple per acre yields of the following crop. Cut or grazed, combined with small grains, such as oats and rye, or seeded alone, it furnishes splendid winter and spring

pasture. Makes wonderful hay, very rich in protein; all stock relish it.

Sow during August through November at the rate of 20 pounds per acre in drills or 30 pounds broadcast. The three-row drill is well adapted for planting between cotton and corn rows. It insures uniform depth (2 inches) of covering, and also an even distribution of seed, and makes it possible to sow vetch before all the cotton is picked.

When Vetch produces 15 to 20 lbs. of green matter per 100 square feet, the crop may be turned under. This is usually during early April. It will decay sufficiently in about two weeks to plant your corn or cotton, or some other summer crop. Seed should be inoculated.

Prices: Not prepaid: 10 lbs. \$2.40; 100 lbs. \$20.75. Write for prices on larger quantities.

Common Vetch

773. The most popular type in Louisiana. The State Experiment Station claims that Common Vetch can satisfactorily be grown in most areas where Hairy is generally grown. Common Vetch prefers sandy loams that are well drained, but will produce good crops on most other soils where water does not stand. It is not as resistant to cold as Hairy. When planted alone, it requires 30 to 40 lbs. per acre. Half the quantity is sufficient when sown with small grains. Seed should be inoculated with Nitrugin. Not prepaid: 10 lbs. \$1.40; 100 lbs. \$10.65. Write for prices on larger quantities.

Austrian Winter Peas

\$8⁰⁰

per
100 lbs.

809. One of the leading soil-builder and winter cover crops for the South because of its large, heavy growth on practically all soils and its ability to resist winter freezes. Makes a splendid temporary pasture during late winter. It grows about 5 feet high, can be planted by itself, but does fine with a light seeding of oats, rye or barley to hold vines off ground; makes a heavy tonnage of splendid hay.

Protects your soil, holds and increases its fertility, furnishes grazing for your livestock, or makes valuable green manure, decaying rapidly when plowed under.

Sow Austrian Winter Peas during September through November, in drills at the rate of 30 lbs. per acre and cover 2 inches. Also sown broadcast and disked in. Turn under during late March or early April. Inoculate seed with NITRAGIN.

Prices: Not prepaid: 10 lbs. \$1.10; 100 lbs. \$8.00. Write for current market prices on larger quantities when ready to buy.

Blue Lupine

850. A Winter cover crop which is gaining rapidly in popularity throughout the South. The plants grow upright and usually attain a height from 2 to 3 feet. Sow seeds October-November in drills 12 to 18 inches apart using about 50 lbs. seeds per acre. The crop is usually ready to turn under about May. 1 lb. 30c; 5 lbs. 95c. Not prepaid: 10 lbs. \$1.15; 100 lbs. \$8.50.

Sweet Blue Lupine

851. Sweet Blue Lupine is an excellent pasture and feed crop, as well as a soil-builder. Stock can be turned in on Sweet Blue Lupine when it is only a foot high. The best way, however, to get the maximum food value from this crop is to permit it to go to seed and then turn it in your livestock. In this way your stock will get the advantage of both the plant and seed. It is a selection of the Common or Bitter Lupine. The plants are quite similar, but Sweet Blue Lupine is quite easily distinguished by its almost purplish-blue flowers. Sow the seeds from September to November in drills 12 to 18 inches apart, using about 50 lbs. of seed per acre. 1 lb. 45c; 5 lbs. \$1.80. Not prepaid: 10 lbs. \$2.30; 100 lbs. \$20.00.

DWARF ESSEX RAPE

876. Every hog grower can produce pork at a lower cost if he has a good Rape pasture. Relished by all kinds of stock, but principally planted for hogs and poultry. Make fine "greens" for table as a substitute for turnip or spinach "greens" when young. It grows 15 to 30 inches high and makes a splendid green and forage crop in 6 to 8 weeks. Grows on any soil. Sow any time during the summer, fall, or winter, either in drills (4 pounds per acre) or broadcast (8 pounds per acre). Planted in small grain, will pasture 20 hogs for 3 months. 1/4 lb. 15c; 1 lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50. Not prepaid: 10 lbs. \$1.90; 100 lbs. \$16.00.

ABRUZZI RYE

776. Far ahead of any other Rye for the South because it gives a better yield, stands up well and produces good grazing. Our pure Southern-grown stock stools out quickly and heavily, covering the ground and protecting its roots in winter. It can be pastured a month to six weeks earlier than other types. Invaluable for the dairyman and stock farmer because it produces 50 per cent more pasture. We offer only stock grown from Coker's Pedigreed seed. (Treat before planting with New Improved Cerean. See page 16.) Not prepaid: Pk. (14 lbs.) \$1.55; bus. (56 lbs.) \$4.75; 2 bus. or more \$4.50 per bus. Write for quantity prices when ready to buy.

AMERICAN RYE GRASS

840 You should sow liberally of this famous quick hay and winter pasture grass. The seed cost is so reasonable. A bag (100 lbs.) will easily plant three acres. American Rye Grass is deep green in color and grows 2 to 3 feet tall. Provides continuous grazing from mid-winter until June. Furnishes rich and palatable feed and plenty of it. Sheep, cattle, hogs, horses and poultry relish it. It supplies proteins, minerals and vitamins so badly needed by growing stock. Stands a lot of pasturing and even, when grazed to the ground makes rapid renewed growth as soon as given an opportunity. Little soil preparation is necessary. No plowing and covering is essential, as with oats and the like. Simply sow the seed

and rake in. On compact soils loosen the ground with a rake or harrow, then sow the seed broadcast and lightly harrow in if convenient. In pasture mixtures it does well with Crimson Clover, Lespedeza, or other grasses and clovers. Plant during Sept., Oct. and Nov.

Prices: Not prepaid: 10 lbs. \$1.80; 100 lbs. \$14.90; 500 lbs. \$74.00; 1,000 lbs. \$146.50.
840-A Recleaned for lawns. 5 lbs. \$1.40. Not prepaid: 10 lbs. \$1.85; 100 lbs. \$15.50.

Kentucky Blue Grass

836 Excellent lawn grass; ideal for golf fairways and putting greens; the sweetest and best pasture grass. Plants slightly creeping with deep green narrow leaf blades. It is only adapted to parts of the upper South and Northward. 5 pounds will sow 1,000 square feet for lawns; 10 pounds per acre for pasture. Plant in the fall and early spring. Lb. 90c; 5 lbs. \$4.25. Not prepaid: 10 lbs. \$6.75; 100 lbs. \$62.50.

Fancy BERMUDA Grass

829 The most dependable and permanent Grass for lawns, golf-courses, and athletic fields. Stands long, hot, dry summers without injury. It grows on all kinds, from heaviest clay to the lightest sand, and furnishes abundant pasturage. Sow broadcast on well-prepared land from March until October in lower South, May to September in upper South and cover very lightly. Seed germinates slowly. Sow 10 to 15 pounds to the acre for pastures; 5 lbs. to 1,000 square feet for lawns. Germinates in 20 to 30 days with proper soil moisture. Lb. 65c; 5 lbs. \$2.85. Not prepaid: 10 lbs. \$4.20; 100 lbs. \$38.00.

Red Top

833 Good for lawns and pastures. Stands wet weather and overflowing for even two to three weeks. Will hold well during the summer if cut often. Sow from October until April at the rate of 5 pounds per 1,000 square feet for lawns and 10 to 15 pounds per acre for pastures. Cover seed very lightly. Lb. 90c; 5 lbs. \$4.25. Write for prices on larger quantities.

Hulled BERMUDA Grass

826 Reuter offers Extra Hulled Bermuda Grass with the hull removed, a process which gives much quicker germination. Under favorable moisture and soil conditions, Reuter's Hulled Bermuda Grass will germinate in 7 to 10 days, whereas unhulled seed requires 20 to 30 days. Furthermore, it is more economical, because only about half the quantity is necessary to sow a 100 square feet of lawn.

Seed should be sown from March until November in the lower South and from May until September in the upper South. Plant 3 lbs. to each 1,000 (50x20) sq. ft. of lawn, fairway, athletic or aviation field. Use 10 lbs. per acre for pasture. Plant when ground is warm because Bermuda will not germinate in cold soil. Be sure to specify HULLED SEED when ordering. Lb. 80c; 5 lbs. \$3.50. Not prepaid: 10 lbs. \$5.50; 100 lbs. \$50.00.

RHODES GRASS

844 A valuable pasture and hay grass for South Texas. Yields 6 to 8 cuts of rich hay, each averaging 1 to 1½ tons per acre. Does not stand severe freezing. Thrives best on soils that are fairly moist. Is very leafy, slender and erect, producing stems from 2 to 5 feet in height. The hay is easily cured. Broadcast seed anytime during the early spring on well-prepared land at the rate of 12 lbs. per acre. Cultural leaflet free. Lb. \$1.25; 5 lbs. \$6.75. Write for prices on larger quantities.

Dallis Grass

834 (*Paspalum Dilatatum*.) One of the most valuable permanent pasture grasses in the South. Comes nearer growing year-round than any other grass. Cultivation readily kills it. Makes its fastest growth on heavy or moist bottomland, but gives satisfactory results on dry hill lands, and will even grow in burnt-over timber land. It stops washes and gullies. Withstands continued drought remarkably well. We know of no better grass to withstand flood conditions on lowlands. Light freezes do not injure this grass.

Combines well with Bermuda and Carpet Grasses, and once started in mixtures keeps a satisfactory balance with other crops. Lespedeza grows well with Dallis Grass mixtures, also White Dutch, Alsike, Hop, Bur, Black Medic and Persian Clover. Plantings are made the year-round, but principally in late summer and early fall, and in the spring commencing in January. Broadcast 10 to 15 lbs. per acre if sown alone.

834-A Imported Seed. (50% or better pure live seed.) Lb. \$1.20; 5 lbs. \$5.50. Not prepaid: 10 lbs. \$9.00; 100 lbs. \$85.00.

834-B Domestic-Grown. Lb. 80c; 5 lbs. \$3.50. Write for prices on larger quantities.

RESCUE GRASS

842 (*Bromus Schraderi*) Makes fine early spring pasture. Grows in tufts or bunches, often a foot in diameter and is very leafy at the base. The stems are nearly erect. 2 to 4 feet high. Furnishes nutritious grazing until May. Does well mixed with Rye Grass and Bur Clover at the rate of 30 to 40 lbs. per acre. Lb. 60c; 5 lbs. \$2.25. Not prepaid: 10 lbs. \$8.60; 100 lbs. \$83.00.

ALTA FESCUE

822 Alta Fescue has great promise of being the greatest all year round pasture, hay and silo grass for the South. It is a perennial grass attaining a height of from 2½ to 3 feet. Grows practically the year round in favorable seasons. The growth may be somewhat slow the first year while an extensive root system is being developed, but should be rapid and vigorous after that time. Alta Fescue is adapted to nearly all soils in the South that will retain the needed moisture and is particularly tolerant to wet and even overflowing land. When planted with clovers for mixed pasture it will greatly curtail clover bloat.

The seeds may be sown from September to December and again in February and March. Fall planting, however, is recommended. Sow at the rate of 10 to 15 lbs. of seeds per acre. **Lb. 95c; 5 lbs. \$4.35.** Not prepaid: 10 lbs. \$7.00; 100 lbs. \$65.00.

Kentucky 31 Fescue

823 (Certified) Kentucky 31 is a perennial bunch grass similar to Orchard Grass but with more of a spreading habit of growth. Unlike Orchard Grass the bunches increase in size and it eventually makes a close tight sod. It puts up blades in great numbers with possibly the greatest rate of growth in the late Summer, Fall and Winter when it stays noticeably greener than other perennials. It is best suited for use as a permanent pasture grass since it improves with age and builds up a heavy dense sod that prevents erosion, and holds up livestock in wet, muddy weather, and produces large amounts of succulent pasture the year around. Its palatability is much improved when it grows with a good legume. It will grow almost anywhere but the better the soil, the better the grass. It is particularly suited to wet ground and will survive water standing on it for weeks at a time. It also grows well on high ground and stands drought well. A well prepared seed bed is advised but not absolutely necessary. Sow between Mid-August to Mid-October. Plant 10 to 20 pounds to the acre depending on whether a dense sod is desired or not. Grows well with Ladino Clover. **Lb. \$1.15; 5 lbs. \$5.25.** Not prepaid: 10 lbs. \$8.10; 100 lbs. \$76.00.

CARPET GRASS

830 Carpet Grass is one of the most important and valuable permanent grazing grasses for the South. A perennial spreading by creeping stems which root at every joint, thus forming a close, compact turf. Compared with Bermuda Grass, Carpet Grass is its equal in feeding value; it may be grazed considerably later in the fall and earlier in the spring; it does better on poor, sandy soils and furnishes more grazing; it is better adapted to wet sour soils and thrives better under hot, humid conditions. Like Bermuda, it is palatable and relished by all livestock.

It is strictly a pasture or lawn grass and stands close grazing and heavy trampling; in fact, it grows best and spreads more rapidly when closely grazed and trampling seems to improve it. Can be sown over your present pasture, creek bottom, or cut-over woodland without plowing or disking. Produces practically year-round succulent green pasture. Easily eradicated by plowing. It does splendidly sown with Lespedeza, Dallis Grass, Black Medic, White Clover and Bur Clover. Carpet Grass can be grown wherever the temperature does not fall below 10 degrees. Fall sowings are conducted during Sept., Oct. and Nov. It is a drought-resisting grass and furnishes fine grazing during long dry spells, when all other grasses are dead. Carpet Grass is easy to start, if you plant first quality seed. Most of the seeds on the market are low grade. Reuter's stock is the finest available from the choicest meadows in the South. Sow at the rate of 10 to 15 lbs. per acre for pasture and 25 to 30 lbs. for lawns, public parks and golf courses. **Lb. 70c; 5 lbs. \$3.00.** Write for prices on larger quantities.

PANIC GRASS

845 Giant Blue Panicum is a marvel among pasture grasses. It is a deep-rooted perennial bunch grass that forms good sized, tough crowns by means of thick, short, bulbous rhizomes. The plants may reach a height of six feet under the best of growing conditions. The bottom half of the stem has large nodes and body internodes. Branching from the lower nodes is common if the main stem is cut off. The panicles are terminal on the stems and branches. It doesn't make much growth for the first several months during which time it is building a root system. After it gets the roots well established it grows amazingly fast and is resistant to drought. It prefers heavy loam soils of high fertility and needs irrigation if annual rainfall is under 25 inches.

Panicum is a sweet grass used for hay and pasture. It is rich in protein and food value and yields per acre more than double that of Alfalfa. Seed should be planted in moist soil and covered lightly using only one pound per acre. **¼ lb. 50c; lb. \$1.60; 5 lbs. \$7.50.** Not prepaid: 10 lbs. \$13.50; 100 lbs. \$125.00.

BAHIA GRASS

PENSACOLA

843 This grass for grazing is as good as any of the improved grasses if grazed while young or kept heavily grazed. It stands more cold weather and more dry weather than any of the other Summer grasses. Hot weather, cold weather, dry weather, rich land, eroded land, clay or sand—Pensacola Bahia will thrive and grow. Relatively unknown 5 years ago, it is fast becoming one of the South's leading grasses. Pensacola Bahia is a narrow leaf Bahia Grass (*paspalum notatum*) that has a heavy, deep, fibrous root system. It has been grown successfully in combination with Clover, Lespedeza and Fescue Grass. Plant at the rate of 10 to 20 lbs. per acre. **Lb. 90c; 5 lbs. \$4.00.** Not prepaid: 10 lbs. \$6.10; 100 lbs. \$56.00.

Cattle on Pensacola Bahia Pasture

COMMON

835 An excellent pasture grass for the lower South. Bahia is a deep rooted, perennial grass forming a dense turf of leaves. The plants spread slowly by short, stout stolons and range in height up to 30 inches. Once well established Bahia will stand temperature of 12 above zero. It is widely adapted, growing on both high and low soils and will grow on drier land than other pasture grasses because of its deep root system. Sow the seed ½ to 1 inch deep at the rate of 10 to 20 pounds per acre. New crop seeds ready October 1st. **Lb. 50c; 5 lbs. \$2.10.** Not prepaid: 10 lbs. \$2.80; 100 lbs. \$25.00.

Reuter's Superior Strains CAULIFLOWER SEEDS

Snowball Cauliflower

Our cauliflower seed is grown for us by the foremost American and European specialists and we believe our strains are equal, if not superior, to any stock being offered, regardless of price.

Culture. Requires rich soil and abundant moisture. The only significant difference in the culture of Cauliflower and that of cabbage is that with Cauliflower the heads must be protected from sunlight in order to insure the much desired white curd. This is most readily accomplished by gathering the leaves together loosely, as soon as the heads begin to form, and tying them at the top. One ounce will produce 2000 strong plants; 1/2 pound sufficient for an acre.

**HELIOS
Cauliflower**

148 HELIOS (Original)

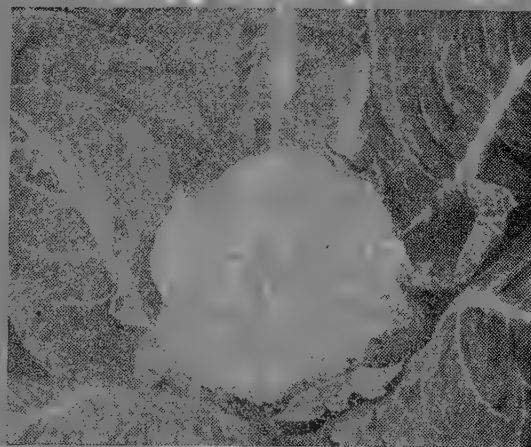

Helios is an outstanding Danish introduction in Cauliflower. The large, solid heads are snow-white with uniform tall, upstanding protecting foliage. It is a late maturing variety with the foliage affording excellent protection against cold weather. Especially recommended as a late maturing crop following the Snowball. Pkt. 35c; 1/4 oz. 90c; 1/2 oz. \$1.65; oz. \$2.75; 1/4 lb. \$9.00; lb. \$32.00.

144 SNOWBALL

55 days. The large heads are pure snow-white, solid, finely rounded and very deep. It heads so evenly that the entire crop may be harvested within a short time after it begins to mature. The plants are quick-growing and vigorous, and the erect leaves are quite large and curl over the heads protecting them from the sun. The compact heads make a beautiful appearance on any market and always sell for the highest prices. Pkt. 25c; 1/4 oz. 75c; 1/2 oz. \$1.25; oz. \$2.25; 1/4 lb. \$7.00; lb. \$25.00.

149 STELLA NOVA

This Danish developed strain is early maturing, being ready for market before the Snowball. The snow-white heads are of medium size, solid and very uniform. The foliage is of medium height. The early maturing habit of the Stella Nova makes it particularly valuable for a first crop. Also excellent for a late quick-growing crop. Extend your cauliflower season by planting a few rows of Stella Nova for early maturing. Pkt. 30c; 1/4 oz. 80c; 1/2 oz. \$1.45; oz. \$2.60; 1/4 lb. \$8.25; lb. \$30.00.

Crisp delicious LETTUCE

With the discovery of its valuable health-giving vitamins, Lettuce has become a year-round table necessity. It is so easily grown that no garden need be without a generous supply.

Culture. Lettuce requires a rich soil, plenty of moisture, and a quick, steady growth from the time seeds are planted, until the heads are ready for use. The most common causes of failure to get Lettuce to head properly are too late planting and not giving the plants sufficient room for developing. Lettuce seed is difficult to germinate in hot weather. We suggest the seed be first soaked in ice-water for an hour, then wrapped in dampened paper or cheese-cloth and placed in the refrigerator for 10 to 12 hours prior to planting. Spread seed out on dry paper in shade and dry slightly. Immediately broadcast on good moist seed-bed, or sow 8 to 10 inches apart in rows 15 to 18 inches apart, covering with less than $\frac{1}{2}$ inch of fine soil. One ounce will sow 150 feet of row; 2 to 3 pounds an acre.

November and December are the most successful planting months in this latitude. Write for Reuter's leaflet "How to Grow Hyacinths." It's free.

BANNER YIELDS FROM OUR SEED OATS

CAMELLIA

778 Developed by the Louisiana Agricultural Experiment Station and released in 1942. This new strain of Oats is the result of years of selection and testing. It has shown almost complete resistance to leaf rust—a particularly important factor in South Louisiana where leaf rust epidemics in many parishes have made oats a hazardous crop. It is not resistant to stem rust but this disease is less prevailing and also less serious since it does not become severe until the plants are practically mature. The Camellia Oat produces strong, vigorous plants reaching up to 4 feet in height, and have large plump kernels with an insignificant awn. The large dark green leaves furnish a dependable winter grazing crop. It is a heavy yielder and returns of 65 bushels per acre are reported from South Louisiana. Not prepaid: Bus. (32 lbs.) \$3.10; 4 bus. or more \$2.85 per bus.; 48 bus. or over \$2.80 per bus. Write for quantity prices when ready to buy.

Field being Harvested

ALBER

770 This Oat is recommended as a most dependable producer. It matures fully ten days earlier than Red Rust-Proof varieties. Stools equally as well, withstands more adverse weather, just before harvest time. Yields 25 to 40 bushels more grain per acre. Definitely more rust-resistant than any of the so-called "rust-proof" strains. In one parish in Louisiana where Oat production has been a total failure, the famous Alber Oats yielded an average of 60 bushels to the acre for three consecutive years. This wonderful Oat has been tested by the Experiment Station at Baton Rouge, and for six consecutive years it has been the highest yielding variety and a grand feeding Oat. Good land is necessary and the use of Nitrate as a top-dressing essential unless your soil is very rich. For hay cut in milk stage; for grain cut when fully ripe. Not prepaid: Bus. (32 lbs.) \$2.95; 4 bus. or more \$2.70 per bus.; 48 bus. or over \$2.65 per bus. Write for quantity prices when ready to buy.

RED RUST-PROOF

777 New Nortex. Exceptionally fine strain of rust-resistant Oats that is hardy, heavy-yielding, producing a medium tall, stiff straw and an enormous tonnage of grain and hay. It is a very vigorous grower, robust, productive and does well on all types of soil. Sow during October and November at the rate of 2 to 3 bushels per acre. Cut for hay when the Oats are in the milk, or about half mature. Oats are easier to grow than corn, cost less to make and are a better feed in summer for your stock, being less heating. Stools out strongly and makes the best kind of grazing for cattle, hogs, horses and mules during the winter and early spring. Our seed is thoroughly recleaned. Not prepaid: Bus. (32 lbs.) \$2.65; 4 bus. or over \$2.40 per bus.; 48 bus. or over \$2.35 per bus. Write for quantity prices when ready to buy.

FOR OATS USE CERESAN

Treat your Oats with Ceresan to insure against losses from smut and other diseases. Easy to apply, and destroys seed borne diseases. 1/2 oz. will treat one bushel of Oats. Ceresan M: 14 oz. \$1.25; 3 lbs. \$3.55, postpaid. Not prepaid: 40 lbs. \$35.85; 100 lbs. \$85.00.

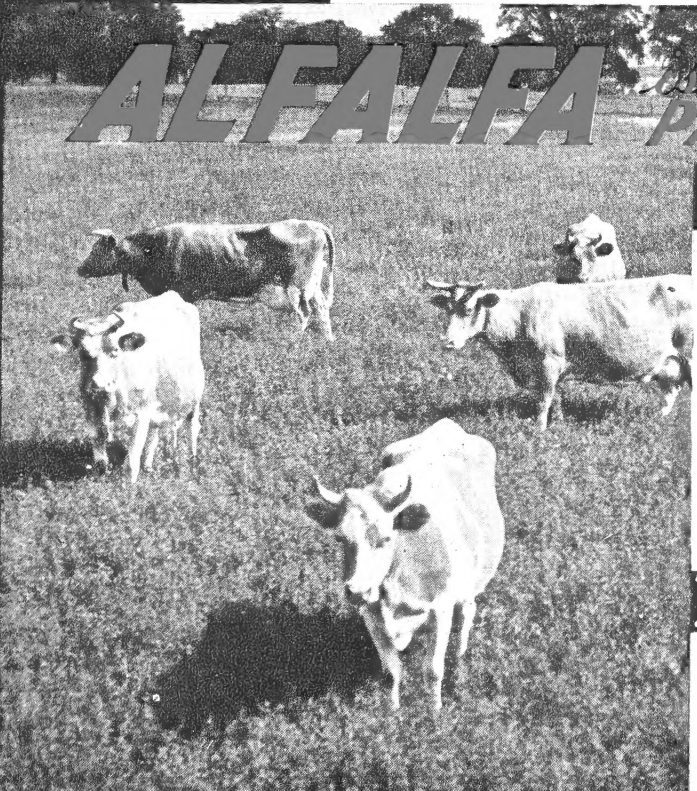

ALFALFA is excellent for WINTER PASTURES and HAY

HAIRY PERUVIANE

702 Superior to all types for production where the temperature does not fall below 10 degrees Fahrenheit. Highly recommended for the entire lower South. Yields 10 to 20 per cent more growth during the Winter and can be cut through the entire year for hay. It is a tall, vigorous grower, and will live as long as any type where the Winters are not too cold and where there is Summer moisture. Yields one more cutting and from one to three tons more hay in a season than other Alfalfa. On poor or sandy land, Hairy Peruvian will give you cuttings of hay where other kinds will not. Sow during early Fall and Spring in thoroughly prepared, well-drained soil, broadcast or in drills, at the rate of 15 to 20 pounds per acre. Alfalfa will produce more good feed per acre, add more vegetable matter and nitrogen to the soil than any other crop. Seed should be inoculated. Lb. 65c; 5 lbs. \$2.75. Not prepaid: 10 lbs. \$3.80; 100 lbs. \$35.00. Write for quantity prices when ready to buy.

WHITE DUTCH CLOVER

**IMPROVE YOUR
WINTER PASTURES**

734 Louisiana-grown White Dutch Clover is the only plant that furnishes abundant grazing throughout the year under severe Southern conditions. The hottest dry summers do not stop its steady and sure growth. It has no equal for winter and early spring grazing. Louisiana-grown seed produces a crop that blooms fully a month earlier than imported seed, growing several inches taller with leaves and stems twice as large. It is relished by all livestock. It is adapted in the South to practically every region and type of soil. It is a perennial. White Dutch Clover does well with Bermuda and Dallis Grass, as well as with Kentucky Blue Grass and Red Top in the upper South.

Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone. On established pastures, from 4 to 6 lbs. of seed per acre will give a good stand. Seed should be inoculated with NITRAGIN: 1/4 lb. 45c; 1b. \$1.25; 5 lbs. \$5.25. Not prepaid; 10 lbs. \$8.50; 100 lbs. \$80.00.
